Styrian know-how is required:

Fourth largest aircraft manufacturer in the world on technology scouting in Styria

July 12, 2018 at 16:17

A representative of the Brazilian aircraft manufacturer Embraer has been on technology scouting in Styria since Monday of this week: Fernando Fernandez, responsible for advanced materials and processes at Embraer Brazil, is visiting leading aerospace companies and research institutes at the invitation of the mobility cluster ACStyria and Graz University of Technology.

Great interest in Styrian research expertise

Of particular interest is the excellent networking between industry and research, with which Styria is making its name internationally. The program also included a meeting with Sergio Amancio - himself a native of Brazil - who held the BMVIT Endowed Professorship for Aviation at Graz University of Technology, which was created at the beginning of this year. The FH Joanneum, the Montanuniversität Leoben and the Polymer Competence Center Leoben also spoke with Embraer about research cooperations in the field of materials science. "We are particularly interested in disruptive technologies and innovations in this area," emphasizes Fernando Fernandez. "I am not only impressed by the innovations of the companies visited and academic institutions,

Technology meeting on materials and structures in aviation

Following visits by voestalpine BÖHLER Aerospace and Upper Austrian ACStyria partners such as RO-RA Aviation Systems and Peak Technology GmbH, the ACStyria Technology Meeting Materials & Structures for Aerospace took place this Thursday. After keynotes by Fernando Fernandez and Sergio Amancio, around 30 participants discussed current material trends and developments in the aerospace industry. In addition, best practice examples of voestalpine BÖHLER Aerospace, Ecor International and PCCL were presented.

About the ACStyria

The mobility cluster ACStyria represents a network of around 290 companies in the automotive, aerospace and rail systems sectors - with more than 55,000 employees and a total turnover of more than 15 billion euros. The core service of the cluster since 1995 is the networking and support of Styrian companies along the entire value chain. He sees himself as a link between business, industry, research and public institutions.
